

FOCUS ON ANIMAL TESTING

1. Write a paragraph summarizing three ways that animal testing has led to medical breakthroughs.
2. Do you think researchers should be allowed to do animal testing? Give at least two reasons to support your answer.
3. Which animals make up more than 90 percent of animals used in testing?
 - A. rats, mice, fish, and birds
 - B. cats, dogs, guinea pigs, and rabbits
 - C. sheep, pigs, chimpanzees, and monkeys
4. Why do the replacement guidelines suggest using simpler animals for testing whenever possible?
 - A. Using simpler animals produces data that is easier to analyze.
 - B. Using simpler animals helps minimize the amount of suffering the animals experience.
 - C. Using simpler animals increases the number of animals researchers can afford to use.
